

Everything Needed for Flowers - the SMARTi way!

Longer Shelf life - Enhanced Aroma - Healthy Stems.

Its quite unbelievable that a cut rose flower can last for 2 weeks?

Yes indeed this happened when we used SMARTi for our Rose plants in the terrace garden. Rose placed in the water lasted for **over 10 days**. And this is amazing! This is the Story of Mr. Sethi and Mr. Mundada from Bangalore North, who had been silently working and taking tremendous efforts over last many years to make the organic farming economically more viable with natural nutrients available at a reasonable cost to the farmers and growers.

A rose plant treated with SMARTi Solution on the terrace garden is plucked and placed in the water bottle. Usually, we have seen that this last for max 3-4 days before the leaves and petals falls. In this case, as seen below, the flower lasted for 2 weeks, and the leaves are still showing a very healthy signature. Its purely the soil and using Patented product called SMARTi no additional fertilizers used.

Shelf-life is the primary factor that floriculture industry is hinged upon, resulting in the benefit or losses, with the other factors such as delayed shipment plays the devil due to lost quality of flowers at an hourly rate.

SMARTi Solution address this issue – right at the root level by providing the adequate strength across all stage of Growth – effectively enhancing the life after cutting, by merely providing the water as needed. In the Flower Export community, this may sound the ringing bells for new era of finding many business avenues and overcome today's challenges, True to the theme of SMARTi – **“Maximize Your Potential”** by SMARTi way of cultivation, that provides right nutrients through the life of plant.

Enhancing the aroma of flowers has been achieved naturally! Thus the original smell & fragrance of flowers starts coming back, which has been lost in the interim due to the excess of chemical fertilizers. SMARTi Solution has a significant impact on building the aroma right from soil conditioning through healthy and strong stems, high no of leaves and size, as well as you will notice a distinct difference in the sharpness and backside of the leaves which exemplify the best health of plant. Disease resistance and immunity increased substantially. There by improving the all-around Quality as well as no of branches increased multifold – compared to what we get in the market in general today.

Reversing the trend – Soil degradation with chemical based fertilizers has impacted us terribly, umpteen examples of what the overdose of fertilizers has done to farmers in Punjab and Gujarat and all over India in general, in their quest to maximize the yield from the farm land. SMARTi makes a profound impact on reversing this trend by conditioning the soil through liquid based Silicon. This Water Based Solution, has dissolved Silicon that provides the conditioning nutrients much needed for the soil and with the regular application, it can change the soil parameter completely within the interim period of 2 to 3 years. This is really revolutionary!

What SMARTi Solution does is phenomenal shift.

SMARTi Way of Floriculture – Organic, Without Any fertilizers		Traditional Organic Cultivation Without Any Fertilizers	
Day-2	Day-4	Day-6	Day-8
			
Day-10	Day-12	Day-14	<ul style="list-style-type: none"> • The leaves are still intact after 2 weeks from plucking the flower from the plant. • Demonstrating the high increase and enhancement of Shelf Life and providing boost to the longevity of the Flowers. • Sharpness and luster of leaves continues to retain. • Rose regained the aroma, which was lost before.
